

CONTROLLING OFFICER'S REPLY

EEB(F)119

(Question Serial No. 1948)

Head: (49) Food and Environmental Hygiene Department

Subhead (No. & title): (-) Not specified

Programme: (1) Food Safety and Public Health

Controlling Officer: Director of Food and Environmental Hygiene (Ms Irene YOUNG)

Director of Bureau: Secretary for Environment and Ecology

Question:

With regard to the prevention and control of rodents, please advise this Committee of the following:

1. Please set out the number of live rodents caught and the number of dead rodents collected each month in the past 5 years and the staffing involved, with a breakdown by the 18 District Council districts.
2. Please set out the Rodent Infestation Rate (RIR) recorded in the past year and the average cost of each live rodent caught, with a breakdown by the 18 District Council districts.
3. The Food and Environmental Hygiene Department (FEHD) indicated in the past year that it would gear up with the Electrical and Mechanical Services Department to launch a pilot scheme in Yeung Uk Road Market, Tsuen Wan in the second quarter of 2022 to deploy wireless motion detection sensors, rodent traps, bait boxes, etc. through the application of Internet of Things solutions, so as to step up the monitoring of rodent prevention and control work in markets. What is the progress? How does the FEHD assess the effectiveness of the scheme? Is there any plan to extend the pilot scheme? If yes, what are the details? If no, what is/are the reason(s)?
4. The FEHD conducted two rounds of anti-rodent operations in designated target areas in the territory, each lasted 8 weeks, and an enhanced version of the anti-rodent operations in designated areas in some selected areas in the past year. What was the effectiveness of the operations?
5. Regarding the 19 overnight rodent control teams set up in the past year, please set out the monthly number of live rodents caught by each team since their establishment. Has the FEHD compared the figures with those of the same period of the year before? If yes, what are the details? If no, what is/are the reason(s)?

6. What is the progress of the formulation of the “Composite RIR”? When is the new RIR expected to be released?

Asked by: Hon LEUNG Hei, Edward (LegCo internal reference no.: 28)

Reply:

1. The number of dead rodents collected and the number of live rodents caught by the Food and Environmental Hygiene Department (FEHD) in each month of the past 5 years (2018-2022), with a breakdown by District Council district, are provided at **Annex 1** and **Annex 2** respectively. The number of in-house staff and the number of outsourced contractor staff engaged in pest control work under each District Environmental Hygiene Office of FEHD are provided at **Annex 3** and **Annex 4** respectively. Rodent control work is part of the daily duties of the pest control staff of FEHD’s District Environmental Hygiene Offices, and FEHD does not keep a breakdown of the manpower involved.
2. The Rodent Infestation Rate (RIR) in 2022, with a breakdown by District Council district, is provided at **Annex 5**.

In 2022-23, the overall revised estimated expenditure of FEHD on pest control in public areas and facilities under its management was \$796 million. The expenditure covered not only rodent prevention and control but also the prevention and control work of mosquitoes and other arthropod pests with public health importance. Besides, FEHD’s work on rodent prevention and control is not limited to “rodent disinfestation” only. Such work also includes measures to prevent rodent breeding (such as filling of rodent holes, installation of rodent guards, removal of rubbish and junk, etc.), daily inspections, law enforcement, technical support for different departments/organisations, publicity and education, as well as follow-ups to rodent complaints. Therefore, it is difficult to calculate the average cost of catching a rodent.

3. FEHD is committed to enhancing the effectiveness of rodent prevention and control work in public markets through the application of innovative technologies. In late June 2022, FEHD launched the Rodent Control Pilot Project in collaboration with the Electrical and Mechanical Services Department (EMSD) at Yeung Uk Road Market in Tsuen Wan, using the Internet-of-Thing (IoT) technology to improve rodent control management in the market. The use of IoT technology allows FEHD’s large scale deployment of rodent traps and T-shaped bait boxes with sensors to difficult-to-reach locations where rodents frequently access. Through a web-based management platform, information such as the frequency and areas of rodent activities are collected for systematic analysis, which facilitates the formulation of rodent prevention and control strategies. FEHD and EMSD will review the effectiveness of the project in due course, and carefully study its feasibility and future application direction.
4. To intensify district rodent control work, starting from 2017, FEHD has been conducting two rounds of 8-week anti-rodent operations in designated target areas immediately after each phase of the territory-wide and inter-departmental anti-rodent campaign. Since the second round of the anti-rodent operations in designated target areas in 2021, FEHD had conducted trials of an enhanced version of operation in some districts to expand the scope of rodent control and cover more areas with more serious infestation, including

public markets and municipal services buildings, hawker bazaars and rear lanes adjacent to food premises. Large-scale and targeted anti-rodent operations were launched. As the operations had effectively improved rodent prevention and control work at the district level, the enhanced version was fully implemented in all districts in the second round of the anti-rodent operations in designated target areas in 2022. The anti-rodent operations in designated target areas were renamed “strategic anti-rodent operations” and conducted in targeted areas with more serious infestation. More resources were deployed to improve the rodent infestation situations in such areas in a comprehensive, sustainable and strategic manner. After continuous anti-rodent work, the rodent situations in most of the areas have demonstrated different degrees of improvement.

5. Since July 2022, FEHD has set up 19 overnight rodent control teams in all 19 District Environmental Hygiene Offices. The numbers of live rodents caught by the teams since their formation up to end-2022 are provided at **Annex 6**.

The number of live rodents caught has remarkably increased since the formation of the overnight rodent control teams. The number of live rodents caught during the second half of 2022 was 27 728, an increase of around 50% over that in the corresponding period in 2021 (18 459).

6. FEHD is exploring ways to improve the existing methodology of rodent surveillance and conducting trials on the use of thermal imaging cameras with artificial intelligence function for detecting rodent activities at individual survey locations. The aim is to assess the feasibility of formulating a more representative new Rodent Infestation Rate (RIR) to progressively replace the existing RIR, so as to better reflect the rodent infestation situation of the survey locations and facilitate the planning of anti-rodent operations at blackspots.
